

## **LEGACY FLIGHT TRAINING OPENS SECOND TRAINING FACILITY IN SCOTTSDALE, AZ** **Opening of New Training Center Marks 5<sup>th</sup> Anniversary for Legacy Flight Training**

March 30, 2015 - Vero Beach, Florida. Right on time! Legacy Flight Training's second training center is now open for business. The new Legacy Flight Training facility, at the Air Commerce Center at the Scottsdale Airport (KSDL), joins Legacy's facility at the Vero Beach Municipal Airport, in providing PA-46 specific flight training and full-motion simulator training. Legacy Flight Training began operations at KVRB in 2010, and marks their 5<sup>th</sup> Anniversary this year with this expansion of services and continued robust growth.

Legacy Flight Training currently operates the only full motion three-axis Piper Meridian, Mirage and Matrix simulators in the world in their state-of-the-art training center in Vero Beach, Florida. Their simulators can be configured to represent the Garmin G-1000 cockpit or the Avidyne Entegra cockpits, and are easily upgradable to provide the next generation of avionics available in Piper's M-Class. Legacy Flight Training expects to take delivery of their third simulator, destined for installation in the Scottsdale training center, by the end of April. The Scottsdale simulator will be configured as a Meridian, and the facility has been designed to accept installation of a Mirage/Matrix simulator in the future, to round out the training coverage provided. In addition, the new SDL facility has also been designed to accommodate up to four classes running concurrently in dedicated, quiet, multi-media classrooms.

"The last five years have been an exciting time, as we expanded from one simulator, to two, and now to three. Expansion to two facilities marks an important milestone in our 5<sup>th</sup> Anniversary year. Each year, we continue to invest in our equipment and in our team of professional, experienced instructors to ensure that we are providing our customers with the highest levels of safety and knowledge available for this legendary family of sophisticated aircraft. Our customers and their continued safety remains our highest priority and we treasure the life-long relationships we forge with our customers and their families. We take our responsibility to them seriously and we are forever grateful for their confidence and continued trust. We're delighted to be able to expand our services to make our training even more convenient to customers and PA-46 owners across the globe" said Bill Inglis, President & Owner of Legacy Flight Training.

Legacy Flight Training's focus on initial and recurrent training for the Piper PA-46 family of aircraft has allowed them to develop a well-honed training curriculum, which can include either training in the full motion simulator, in the owner's aircraft, or, in both the simulator and the owner's aircraft. While the coursework is standardized across the instructor-team to maintain an unparalleled training experience, each instructor is able to tailor the course pace and subject matter to each

specific customer. Inclusion of training in the simulators allows PA-46 owners to experience and train for events that are too dangerous or risky to simulate in their aircraft, and allows them to take full advantage of all of the benefits of their glass cockpits.

The new Legacy Flight Training West facility offers convenient access direct to the ramp, to street-side parking, and to full line services. From the airside, pilots will find the Legacy Flight Training facility in the Air Commerce Center, located rampside, at the Southwest end of taxiway Alpha.

Legacy Flight Training is an Authorized Piper Training Provider and is FAA Team Approved and Insurance Approved.

Legacy Flight Training's KSDL facility can be reached as follows:  
14605 N. Airport Drive, Suite 120  
Scottsdale, AZ 85260  
480-248-8500

#### **ABOUT LEGACY FLIGHT TRAINING**

Headquartered in Vero Beach, Florida, Legacy Flight Training is owned and operated by Bill and Diane Inglis. Since 2010, the company has operated the world's only full-motion three-axis Meridian, Mirage and Matrix simulators configurable to Garmin or Avidyne glass cockpits, at their state-of-the-art training centers, now at KVRB and soon at KSDL.

The company specializes in Piper PA-46 ground, flight and simulator training, and is dedicated to building life-long relationships through unequalled customer service.
